Assignment 5

Gallery
When you are done

- **Asteroids**

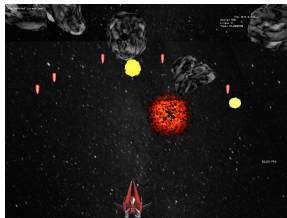

- Control ship
- Spawn asteroids randomly
- Avoid/shoot them down
- Keep track of health if ship crashes

- **Torus Ride**

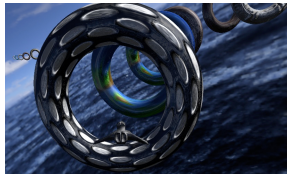

- Place tori along path
- Control ship
- Fly-through rings to collect points
- Time the run

- **Your own idea**

- Set your creativity free!
- Discuss with TAs

Assignment 5

Gallery

When you are done

- Fixed array of asteroids

```
Node asteroids[N];           // Raw array
std::array<Node, N> asteroids; // STL array
```

- Respawn when out of view or shot down
- Hide/unhide:

```
if(visible) {
    asteroids[i].render(...);
}
```

- Randomize position, velocity vector, etc.
- Alter appearances using size, shaders, tessellation, noise, ...

Assignment 5

Gallery

When you are done

- Fixed array of tori

```
Node tori[N];           // Raw array
std::array<Node, N> tori; // STL array
```

- Fixed or infinite (respawn) path
- Hide/unhide:

```
if(visible) {
    tori[i].render(...);
}
```

- Place tori along random spline
- Alter appearances using size, rotation, spin, shaders, tessellation, ...

Assignment 5

Gallery

When you are done

- Use ***bounding spheres*** (BS) and perform ***sphere-sphere*** or ***ray-sphere*** collision tests
 - Cheap tests
 - Avoid other primitives

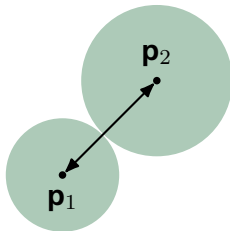

- ***Note:*** no need to use an actual sphere – just ***position + radius***
- More types of intersections at realtimecollisiondetection.net

SPHERE-SPHERE

- Intersection if

$$|\mathbf{p}_1 - \mathbf{p}_2| < r_1 + r_2$$

```
bool testSphereSphere(p1, r1, p2, r2);
```

Assignment 5

Gallery
When you are done

- Spaceship and its BS radius:

```
Node ship;  
float ship_BS_radius;
```

- Asteroid and radii lists:

```
Node asteroids[N];  
float asteroid_BS_radii[N];
```

- Each frame, test spaceship against all asteroids:

```
for (int i = 0; i < N; i++) {  
    if (testSphereSphere(worldPosition(ship),  
                          ship_BS_radius,  
                          worldPosition(asteroids[i]),  
                          asteroid_BS_radii[i])) {  
        /* Change health, end game, gain points... */  
    }  
}
```

PHYSICS: ACCELERATION / INERTIA

- Use fixed *acceleration* instead of fixed *velocity*
 - Smooth starts and stops

```
/* Position and velocity of an object */
vec3 pos = vec3(0.0f, 0.0f, 0.0f);
vec3 vel = vec3(0.0f, 0.0f, 0.0f);

while (!glfwWindowShouldClose(window)) {
    auto const nowTime = (...) now();
    auto const deltaTimeUs = (...) nowTime - lastTime;
    lastTime = nowTime;

    /* Input events */
    // Set some acceleration 'acc' depending on input
    // Add gravity?

    /* Physics */
    float dt = std::chrono::duration<float>(deltaTimeUs).count();
    vel += acc * dt;
    pos += vel * dt;

    /* Render */
    ...
}
```

        case END_GAME:  
            // Deal with showing high-scores  
            // Ask if the player wants to restart  
            if (restart) {  
                current_state = NEW_GAME;  
            }  
        }  
    }  
}
```

CREATING NEW FILES

- Look in `src/EDAF80/CMakeLists.txt`
- Add the new file names to the `EDAF80_Assignment5` target

```
# Assignment 5
add_executable (EDAF80_Assignment5)
target_sources (
    EDAF80_Assignment5
    PRIVATE
        [[assignment5.hpp]]
        [[assignment5.cpp]]
        [[ new file ]]
)
target_link_libraries (
    EDAF80_Assignment5
    PRIVATE assignment_setup # Link more libraries here
)
copy_dlls (EDAF80_Assignment5 "${CMAKE_CURRENT_BINARY_DIR}")
```
